Fathers for Change — Yale's Integrated Programme for Fathers with Partner Violence and Substance Use (Small RCTs, No IPV Difference Yet)

Gender Equality · Good practice · United States of America

Quality score: 48/100

Evidence strength: Moderate

Summary

A 16-week individual and co-parenting intervention for fathers who use partner violence and drugs or alcohol. Two small randomised pilots (18 and 62 fathers) showed better completion but no significant difference in partner violence; a 280-father RCT is enrolling.
