

Voiceitt — Speech Recognition for Atypical Speech, Tested With 66 Users Over Three Months or More in the Nuvoic Project

Digital Inclusion · Good practice · Israel

Quality score: 76/100

Evidence strength: Strong

Summary

Voiceitt adapts speech recognition to people with dysarthric speech. In the peer-reviewed Nuvoic user-testing study, 66 people tested the app over three months or more; 11 (17%) used it independently after setup — an honest signal of both promise and support needs.
